RESEARCH PAPERS

[1] **Housing Is the Financial Cycle: Evidence from 100 Years of Local Building Permits**
(*joint with Gustavo Cortes*)

Does the housing market lead the financial cycle? We address this question by creating a new hand-collected database spanning a century of monthly building permit quantities and valuations for all U.S. states and the 60 largest MSAs. We show that the option to build embedded in permits renders volatility in residential building permit growth (BPG) a strong predictor of aggregate and cross-sectional stock and corporate bond return volatility. This predictability remains even after conditioning on a battery of factors, including corporate and household leverage and firms' exposure through their network of plants to other localized physical risks like natural disasters. Cities and states with more elastic housing supply consistently predict financial market downturns at 12-month horizons, resulting in new trading strategies to hedge against overbuilding risk. A noisy rational expectations framework in which local building permits serve as a quasi-public signal for dividends rationalizes these empirical patterns.

[2] **Picking Up the PACE: Loans for Residential Climate-Proofing**

(*joint with Aymeric Bellon, Francesco Mazzola, & Guosong Xu*)

Invited for dual submit review at the *Journal of Financial Economics* with FRA Conference

Residential Property Assessed Clean Energy (PACE) loans allow homeowners to fund investments in green residential projects through their property tax payments. We collect new PACE loan-level data and develop a novel approach to recover households' home improvement investment decisions from permit descriptions. PACE projects are capitalized into home values, but expansions of the property tax base are partially

offset by an uptick in tax delinquency rates among borrowers. Lenders in PACE-enabled counties expand mortgage credit access, indicating improved recovery values despite a PACE lien's super seniority. Overall, PACE adoption increases local fiscal income while improving climate-proofing of the housing stock.

[3] Interest Rate Caps, Corporate Lending, and Bank Market Power: Evidence from Bangladesh
(joint with Yusuke Kuroishi & Yuhei Miyauchi)

How does market power in the corporate banking sector influence the effects of interest rate cap policies on credit allocation? We study this question using credit registry data in Bangladesh, where the Central Bank capped rates on corporate loans in 2009. Using difference-in-differences designs with variation in pre-regulation, branch-level rates as exposure measures, we find that a one percentage point cap-induced drop in rates increased lending amounts by 30%. This increase in lending is not driven by costs of supplying credit. Our results point to substantial credit under-provision due to banks' market power, even in the presence of relationship lending.

[4] Property Tax Sales, Private Capital, and Gentrification in the U.S.

Awarded Russell Sage Foundation Presidential Grant

Best Paper Award at 2023 FMA Napa/Sonoma Finance Conference

Local governments recover revenues from overdue tax bills by auctioning off super senior claims to homes at semi-annual tax lien or tax deed sales. Using detailed data on over 18,000 tax lien sales linked to owners' overdue tax payment histories, I document tax liens sell at a much larger haircut than mortgage foreclosed homes – for less than 10% of *ex ante* assessed value in the vast majority of cases. Prices of homes neighboring a tax lien sale property, on average, decline within the first two years of the sale. However, in gentrifying areas, large positive pricing spillovers emerge within three years, driven by investors' conversion of former tax lien properties into luxury housing and commercial amenities. Underrepresented minority homeowners are more likely to be displaced by tax delinquency and less likely to transact homes in areas containing recent tax sales to institutional buyers. Private capital's entry into the municipal finance ecosystem has amplified gentrification and the within-city Black-white wealth gap.
